

## Manual Test Assignment

We would like to see a short explanation on how the below scenarios would be handled.

- Let us assume it is not allowed to have testing accounts in production. Testing payments means using real credit cards (which means no automation). In order to avoid the above situations, how would you test in production? How would you ensure issues are tracked?

- With the above conditions in mind, create a brief test plan for testing the below scenario (Feel free to make any assumptions)

- A user can register to Netflix. There are three subscription plans user can opt

Plan A involves a fixed monthly fee of 100 € and unlimited viewing. Plan B involves a monthly fee of 10 eur a few free movies and pay per view of premium movies. Plan C involves no monthly fee and pay per view of every show/movie.

Let us know what was the most challenging for you.

If you have any questions please, let me know!
